Subject: Necropsy findings 13447

05A344  
305- 13447

FINAL DIAGNOSES

F-Y2910 Sacrifice for experiment

T-10500 Vertebral column, NOS  
T-12710 Hip joint  
D-31510 Osteoarthritis, degenerative

T-10500 Vertebral column, NOS  
M-31530 Kyphosis

T-64000 Small intestine, NOS  
T-64070 Small intestine muscularis propria  
M-71000 Hypertrophy  
T-64020 Small intestine mucous membrane  
M-58000 Atrophy, NOS  
M-47200 Plasma cell infiltration

P-12200 Perfusion, NOS

P-30111 Necropsy, gross and microscopic exam with brain

American College of Veterinary Pathologists

Beaverton OR 97006

## History Summary

13447

Female

305 - RHESUS MACAQUE

### SECTION I.

### Vital Statistics, Special Conditions, Project Assignments, & Transfers

13447

Age at Death: 21/167

DEAD

Born: 3/1/1984

Dom: 9935

Sire: UNKNOWN

Type of delivery: Vaginal

Birth Location: CORRAL 4

Died 8/15/2005

Observer of Death:

Pathology No. 2005A0344

Observer:

Autopsy Status:

Birth Weight: 0.00

Age at Death: 21/167 Born at ONPRC

#### SPECIAL CONDITIONS:

Last TB Test: 2/28/2005 Last Weight: 6.000 Kg on 6/30/2005

#### CURRENT MEDICATIONS:

None

#### CURRENT DIETS :

8-15-2005 12:30

Diet #5047 Protein 25%

BID - Two Times a day

8-15-2005 12:30

Diet Produce

SID - Once a day

#### CURRENT PSYCHWELLBEING CASE

Case opened : 6/17/2002

#### SPECIAL FLAGS: None

	SURGERY xLOG	1. ANIMAL PRESENTED AS A CANDIDATE FOR CHRONIC FETAL CATHETERIZATION. FOLLOWING BILATERAL FEMORAL CUTOFFS, IT WAS DETERMINED THAT SINCE BOTH FEMORAL VEINS WERE NON-FUNCTIONAL, THE ANIMAL WOULD BE PRECLUDED FROM CONTINUING WITH THIS PROCEDURE. ALL INCISIONS WERE CLOSED WITH CHROMIC GUT AND THE ANIMAL WAS RETURNED TO HER HOME CAGE TO RECOVER.

305 - RHESUS MACAQUE

	SURGERY xLOG	The monkey was positioned in dorsal recumbency, followed by sterile prep and draping of the posterior trunk. A linear 2 cm skin incision was created in the right midscapular space and a subcutaneous pocket was created by blunt dissection. An Alzet pump was inserted and the defect closed with continuous intradermal 4-0 Biosyn. A linear 2 cm skin incision was created over the caudal aspect of the previously implanted Alzet pump in the right paralumbar space. The pump was removed by traction, and the skin incision was closed with simple interrupted 4-0 Biosyn.

	SURGERY xLOG	The monkey was positioned in dorsal recumbency, followed by sterile prep and draping of the posterior trunk. A linear 2 cm skin incision was created in the right midscapular space and a subcutaneous pocket was created by blunt dissection. An Alzet pump was inserted and the defect closed with continuous intradermal 4-0 Biosyn. A linear 2 cm skin incision was created over the caudal aspect of the previously implanted Alzet pump in the right paralumbar space. The pump was removed by traction, and the skin incision was closed with simple interrupted 4-0 Biosyn.

	SURGERY xLOG	<p>The monkey was positioned in dorsal recumbency, followed by sterile prep and draping. The abdomen was entered via 10 cm linear ventral midline laparotomy, followed by delivery of and draping of the gravid uterus with moistened lap pads. The fetus was belotied to the fundic region, and a 5 ml sample of amniotic fluid was removed with a 20 ga needle and syringe. A transverse fundic hysterotomy was made and delivery of the infant was completed. Two ml of blood was removed from the umbilical artery, and the cord was clamped with Hartmans and transected. Finger dissection of the placenta preceded release and delivery. The hysterotomy was then closed with two layers of 3-0 coated Vicryl in a continuous Cushing pattern, the second imbricating the first. Hemostasis was noted. The abdomen was thoroughly irrigated and suctioned of all saline and blood. The rectus fascia and subcutis were closed with continuous 3-0 coated Vicryl, followed skin apposition with continuous intradermal 4-0 M.</p>

	SURGERY xLOG	<p>Positioning was in ventral recumbency, with prep and draping of the perineum and anus. A 3 cm vertical incision lateral to the anus was created, with blunt dissection to reveal the underlying musculature and nerves. Selected nerves were stimulated for evoked EMG. The monkey was repositioned in dorsal recumbency, again with prep and draping. The caudal abdomen was entered via ventral midline laparotomy, with placement of a Balfour. Selected nerves were stimulated, followed by delivery of the monkey to pathology for necropsy. The monkey did not regain consciousness.</p>
