Remark: Stromal decidualization occurs in part due to either
endogenously generated or exogenously administered progesterone.
Sections submitted contain a well-vascularized proliferation of stromal
cells. The polygonal to plump spindle shaped cells have moderate
amounts of basophilic cytoplasm that varies from granular to
vacuolated. Stromal cells have distinct borders, and round nuclei with
granular chromatin and occasional small, round nucleoli. Glands of
various sizes that are lined by columnar epithelium and frequently
contain red blood cells within the lumen occasionally interrupt the
stroma.

Diagnostic record 1:
d7-72000 (endometriosis, nos)
g-c0080 (with)
t-83480v (endometrial decidua)
t-83000 (uterus, nos)
